Lab assig:3

Task 3: Performance Comparison

Compare a **Convolutional Neural Network (CNN)** against a **Simple Dense Network** after 5 epochs.

Run Comparison Test

Convolutional Network (CNN)
Architecture: Conv2D -> MaxPooling -> Flatten -> Dense
--%
Status: Ready

Simple Dense Network
Architecture: Flatten -> Dense (128) -> Dense (10)
--%
Status: Ready

Feature	Simple Dense Network	CNN (Convolutional)
Spatial Awareness	None (treats image as a flat line)	High (detects edges, shapes, and curves)
Parameter Efficiency	Low (Every pixel connected)	High (Weight sharing via filters)
Best For	Simple tabular data	Images and Computer Vision
